

About Us

Our mission is to restore the balance of natural ecosystems through innovative habitat solutions. Priest Environmental is dedicated to revitalizing landscapes, fostering biodiversity, and empowering communities to coexist harmoniously with the environment. Guided by science, sustainability, and a deep respect for nature, we strive to leave a thriving and resilient planet for future generations.

With 25 years of experience protecting the health of trees in the Cross Timbers region through our parent company, Nate's Tree Service, and drawing on the landscaping expertise of our xeriscaping sister company, Yucca Pointe, Priest Environmental is poised to be your one-stop-shop from planning to implementation. Whether you need to maintain the health of a cross-timbers recreation area or install filter strips to protect your watershed, strive to support native fauna in your own backyard, or want to develop new construction in the most responsible manner possible, we have the experience, knowledge, and equipment to make it happen.

Sustainable Site Development

Tree Preservation & Cohesive Landscape Implementation

From conception to construction, we are a one-stop-shop for sustainable site development planning and field work. Our experts ensure that the invaluable trees, grassland, and other habitat at your project site are identified, effectively protected, and featured in your site design to create a cohesive, considered landscape while maintaining critical habitat possible to support the key flora and fauna in your region.
